

# anti-doxing guide

for activists facing  
attacks from  
the alt-right

## What is doxing?

The violent internet activity of maliciously researching & publicizing your private information.

- name
  - picture
  - family
  - workplace
  - address
  - anything that can hurt you
- what kinds  
of info do  
they  
need?  
after?

## How do they get it?

- social media, public info
- breaking into your internet accounts (social engineering is the easiest way to hack)

Awareness &  
defensive practices  
can help us  
create a

SECURITY  
CULTURE

that helps us all stay  
safe!

# ① 2fa

Enable it on everything!  
Usually there are two methods for verification:

1. text / SMS - can be intercepted so it's not ideal, but it's better than not having 2fa on.
2. an app (like Google Authenticator, or Authy) that generates time-based one-time-use codes

↑  
this is better

stands for two-factor authentication.  
After you enable it, the service will check to see if it's really you when you log in w/ your username + pw.

# ② Password Safety

- never re-use passwords
- change them often
- use a password manager (LastPass, 1Password, keepassX)

↑  
DEFENSIVE MEASURES

Look inside for a defensive checklist!

③ use **encrypted** communication.  
for texts, Signal. for email, protonmail. for group video calls, zoom  
and use verification!  
but you must enable encryption!

④ lock down your **Social media** profiles.

put EVERYTHING on private/friends-only.  
use community-maintained block lists (block together)  
twitter: 1. verify login requests, 2. turn OFF tweet w/ location,  
3. turn OFF photo tagging, 4. turn off discover by email or phone (#?).  
facebook: 1. friends-only (current & past posts), 2. unfriend unknowns,  
3. Set profile info to "Only You" or delete (or fill something else in), delete  
"featured" photos so they can't steal/harass. 4. remove your fb public photo.  
remove birthday.
